

COLOR LABEL PRINTER

Primera
Plymouth, MN, USA

■ **Primera Technology, Inc.**, a global manufacturer of specialty printers, has announced its new LX2000 color label printer. LX2000 is Primera's fastest-ever desktop color printer, producing labels at speeds of up to 6" per second – about 25% faster than Primera's best-selling LX900 color label printer (for comparable print quality). Large, separate ink cartridges for cyan, magenta, yellow and black keep the cost per label low. Other features include pigment-based ink for stronger resistance to UV light, chemicals and water, built in "pizza-wheel" cutter, viewing window to see labelstock levels and wired Ethernet or USB 2.0 and wireless connection options.

AQUEOUS PRIMER

Actega
Wesel, Germany

■ **Actega**, a global supplier of coatings, inks and primers serving the digital print and packaging industries, has announced a new aqueous primer, ACTDigi LEP Primer AQ1409610 for use inline with the HP Indigo 30000 digital press for digital folding carton production. Actega and HP Indigo collaborated closely to develop the primer to provide advantages to joint customers in regulatory requirements and customer experience. The collaboration provides customers first class product and service solutions for digital printing, priming and coating, Actega says.

HIGH PERFORMANCE PRIMER

Kernow Coatings
Pittsford, NY, USA

■ **Kernow Coatings** has announced the expansion of its Cobalt Coating Technology, a high-performance primer for optimizing substrates for HP Indigo printing. The proprietary Cobalt Coating Technology is designed to address the needs of HP Indigo users seeking high performance printable synthetics and the ability to run an increased range of specialty media through the HP Indigo digital press. Built on customer feedback, Kernow's exclusive Cobalt Coating Technology provides a static controlled, durable and robust print surface with optimal ink adhesion to synthetics and specialty media.

REGISTER CONTROL

BST eltromat International
Bielefeld, Germany

■ **BST eltromat** International has extended the functionality of its regi_star 20 register control system by adding two enhanced features: RegiTouch and regi_commander. The two solutions make register control in flexo and gravure printing easier for machine operators,

speed up the setup process and reduce waste. With RegiTouch, machine operators can quickly and easily move the register marks for the printing units, which need to be guided to the required positions either during make-ready or after non-format-related roll changes. All operators need to do is select the register marks for the individual colors on the regi_star 20 touchscreen and move them into a defined area.

CUTTING MODULE

AZCO Corp.
Fairfield, NJ, USA

■ **AZCO Corp.** has designed and manufactured a cut-to-length solution for a complex application that requires unwinding and feeding release liners to be affixed to the top and bottom of an extruded material. The material subsequently needs to be cut to a determined length. The complete system includes dual unwinds, knife assembly, and shingling conveyor. The dual cantilever design brake unwinds feed out the release liners from two rolls, and they are then joined to the top and bottom of the extruded material. The material travels through a set of nip rollers, which compress and adhere the liners to the extrusion. A dancer controls the speed of the nip rollers and keeps the material from wandering.

LINEN FILM

Nobelus
Knoxville, TN, USA

■ **Nobelus**, specializing in printable and overlamine films for print and packaging, is bringing a new linen film to market for label and short run flexible packaging applications. LavishLinen Virgin OverLaminate was created in response to requests from the company's customers for a high-end textured product specifically for the label market. The 1.2 mil laminate is applied with a UV curable adhesive, designed to protect and enhance labels and flexible packaging.
