

APRIL 2012

Punch Assembly high speed operation

Servo motor driven punch assembly allows for high speed operation, precise control, and

low maintenance. The entire station is mounted on a base plate for easy operation. All functions are controlled from the color touchscreen.

Dock Safety System easy to install & use

Salvo drive-away prevention system helps prevent injury and damage to loading plat-

forms by making it impossible for trucks to drive away during loading or unloading. Its Glad Hand lock attaches to the truck's emergency brake line, ensuring the brakes are applied. A uniquely coded key is then released and used to open the dock door to begin loading/unloading the trailer. Only after work is completed and the door closed is the key, needed to unlock the brake lock, released.

Rocker Switch for momentary power applications

Double-pole, three-position rocker switch sequentially makes or breaks electrical contacts in alternate poles. This feature can be combined with appropriate momentary or detent action in alternate positions. The GC-509 switch has one pole that maintains contact in two positions and the other pole that acts as a power disconnect switch. It is rated at 3 amp.

Exchangeable Tip Drill makes holes closer to specs required

CoroDrill 870 exchangeable tip drill is designed for the intermediate hole-tolerance area of IT9 to IT10. Holes can be made more efficiently and closer to required specifications, leaving them better suited for subsequent operations. New cutting

edge geometry provides a safe cutting process with optimized chip control and high penetration rates. Drill comes in 0.472 to 0.826-in. diameters and lengths of 3 and 5 x hole diameter.

Anti-Static Air Cushion Film can be quickly produced on site

Pillow Pak Anti-Static Bubble provides excellent ESD cushioning protection for packaging any shipment. The durable film can be made on site at 120 lfpm. One roll of film is 30 in. wide by 1,200 ft and 7/8 in. high. The entire roll can be inflated in only 2 min, and one pallet of film is the equivalent of one truckload of standard bubble. Static decay is less than 2 sec.
