## Azco Corp.: Inserter for absorbent pads and tray liners

*The ACU-SERT™ CI-250 inserter is a rotary cut-to-length, self contained unit that can be easily positioned anywhere on your production line.*

Its flexible design automatically feeds rolls of material up to 250 mm/ 9 inches wide. The roll of material is mounted on a separate unwind stand, and the outfeed rollers can be adjusted from horizontal to a 45° angle downward for accurate and effective product insertion.

The use of material in roll form will save approximately 20% on the cost of the material compared to pre-cut sheets. Utilizing rolls also reduces labor costs and eliminates operator error. One roll can hold over 30,000 insertions, and there is no need to continuously load a magazine, as is done with pre-cut sheets. Additional benefits include easy mounting, easy setup from a color touchscreen, high productivity of up to 300 inserts per minute, and low maintenance sealed bearings and rotary knife cartridge.
