ORIGINAL PRESS RELEASE

Desiccant Dispenser with Horizontal Discharge

Press release date: Aug 18, 2017

AZCO Corp.'s Off-the-Shelf Desiccant Dispenser Can be Easily Customized

Fairfield, NJ - August 18, 2017 - AZCO Corp.'s 5D SUR-PAK™ desiccant dispenser has seen great popularity due to its compact size, ease of use, and affordability. Customers appreciate the fact that they can run product from all manufacturers, allowing them the freedom of choice to get the most competitive pricing for their material. Product change can be done easily, without tools. A variety of options such as an escapement, a jam sensor, and an equipment stand are available to easily customize the standard unit to meet specific requirements.

An escapement option lays the product flat to reliably dispense desiccant onto a horizontal surface moving below the unit. A jam sensor triggers the unit to automatically shut down when no product is sensed exiting the knife assembly. The entire system can be mounted on a height-adjustable stand with an unwind support.

Desiccant material is guided into traction belts which firmly and securely grab it. The belts are turned by a brushless stepper motor which provides high accuracy and low maintenance. The unit self-threads with the automatic loading feature and feeds the desiccant to the proper starting position. An optical sensor embedded into the knife assembly detects where to make the cut and signals the unit to cycle, and the knife cartridge cuts the material. The unit is PLC controlled, and an operator control panel is provided which includes a touch screen for easy setup and operation. The all electric design requires only standard outlet power.

AZCO Corp. is an ISO 9001:2008 certified company with over 34 years of experience developing solutions for a wide range of feeding and cutting applications. AZCO Corp. will provide the most efficient and cost effective solution for you. Made in USA.
